A,Description: catalyzes the dismutation of 2 molecules of peroxide radical to dioxygen
C,Superfamily: Superoxide dismutase [Cu-Zn]
C,Superfamily: Superoxide dismutase (Cu-Zn)
F,1-35/Domain: signal sequence #status predicted <SIG>F,36-187/Product: superoxide dismutase (Cu-Zn) #status predicted
F,87-183/Disulfide bonds: #status predicted
F,80-082,135/Disulfide bonds: #status predicted
F,180/Active site: Arg #status predicted

C;Comment: This protein is a membrane-bound form.
C;Comment: This protein is a membrane-bound form.
A;Description: catalyzes the dismutation of 2 molecules of peroxide radical to dioxygen
C;Superfamily: superoxide dismutase [Cu-Zn]
C;Keywords: copper; glycoprotein; metalloprotein; oxidoreductase; zinc
F;201-221/Domain: transmembrane #status predicted F;56/Binding site: carbohydrate (Asn) (covalent) #status predicted
F;707.23,71,44/Binding site: copper (His) #status predicted
F;81-170/Disulfide bonds: #status predicted
F;87,95,104,107/Binding site: zinc (His, His, His, Asp) #status predicted
F;167/Active site: Arg #status predicted

Conserved hypothetical protein 382 - Odontella sinensis chloroplast
C;Species: chloroplast Odontella sinensis
C;Species: chloroplast Odontella sinensis
C;Species: chloroplast Odontella sinensis
C;Accession: 578285
R;Kowallik, K.V.; Stoebe, B.; Schaffran, I.; Kroth-Pancic, P.; Freier, U.
Plant Mol. Biol. Rep. 13, 336-342, 1995
A;Title: The Chloroplast Genome of a chlorophyll a+c- containing Alga, Odontella sinensi
A;Reference number: 578285

Submitted (SEP-1995) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Destroys radicals which are normally produced within the cells and which are toxic to biological systems (By similarity).
-!- CATALYTIC ACTIVITY: 2 superoxide + 2 H(+) = O(2) + H(2)O(2).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

J. Bacteriol. 184:4601-4611(2002).

-!- FUNCTION: Destroys radicals which are normally produced within the cells and which are toxic to biological systems (By similarity).

-!- CATALYTIC ACTIVITY: 2 superoxide + 2 H(+) = 0(2) + H(2)0(2).

-!- COFACTOR: Binds 1 copper ion and 1 zinc ion per subunit (By
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        MEDLINE=22137863; Pubmed=121430; Deng W., Burland V., Plunkett G. Submitted (DEC-2002) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Destroys radicals which are normally produced within the cells and which are toxic to biological systems (By similarity).
-!- CATALYTIC ACTIVITY: 2 superoxide + 2 H(+) = 0(2) + H(2)0(2).
-!- COFACTOR: Binds 1 copper ion and 1 zinc ion per subunit (By

Mol. Biol. 302:465-478(2000).

-!- FUNCTION: Destroys radicals which are normally produced within the cells and which are toxic to biological systems.

-!- CATALYTIC ACTIVITY: 2 superoxide + 2 H++) = (0.2) + H(2)0(2).

-!- COPACTOR: Binds 1 copper ion and 1 zinc ion per subunit.

-!- SUBENIT: Monomer (By similarity).

-!- SUBENIT: Monomer (Brightasmic.).

-!- SUBCELIGUAR LOCATION: Periplasmic.

-!- MISCELIANEOUS: Encoded by a cryptic bacteriophage.

-!- SIMILARITY: Belongs to the Cu-Zn superoxide dismutase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       SEQUENCE FROM N.A.

Rotilio G., Valenti P., Battistoni A.;

Submitted (JAN-2004) to the EMBL/GenBank/DDBJ databases.

-! FUNCTION: Destroys radicals which are normally produced within the cells and which are toxic to biological systems (By similarity).

-! CATALYTIC ACTIVITY: 2 superoxide + 2 H(+) = O(2) + H(2)O(2).

-! CORACTOR: Binds 1 copper ion and 1 zinc ion per subunit (By similarity).

-! SIMILARITY: Belongs to the Cu-Zn superoxide dismutase family.

"Unique structural features of the monomeric Cu,Zn superoxide
dismutesse from Escherichia coli, revealed by X-ray crystallography.";

J. Mol. Biol. 274:400-420(1997).

-!- FUNCTION: Destroys radicals which are normally produced within the
cells and which are toxic to biological systems. This enzyme is
highly thermostable.

-!- CATALYTIC ACTIVITY: 2 superoxide + 2 H(+) = O(2) + H(2)O(2).

-!- COAGCTOR: Binds 1 copper ion and 1 zinc ion per subunit.

J. Mol. 1810. 285:283-296 (1999).

-!- FUNCTION: Destroys radicals which are normally produced within the cells and which are toxic to biological systems.

-!- CATALYTIC ACTIVITY: 2 supercoxide + 2 H(+) = 0(2) + H(2)0(2).

-!- COFACTOR: Binds 1 copper ion and 1 zinc ion per subunit.

-!- SUBUNIT: Homodimer.

-!- SUBCELLULAR LOCATION: Periplasmic.

-!- SIMILARITY: Belongs to the Cu-Zn superoxide dismutase family.
                                                                                                                                                                                                                                                                                                                     MEDLINE=83289129; PubMed=6884993; Steffens G.J., Bannister W.H., Flohe L., Gunzler W.A., Kim S.-M.A., Otting F.T., Bannister T.V., Bannister W.H., Flohe L., Gunzler W.A., "The primary structure of Cu-Zn superoxide dismutase from Photobacterium leiognathi: evidence for a separate evolution of Cu-Zn superoxide dismutase in bacteria.";

"Copper-zinc superoxide dismutase of Haemophilus influenzae and H.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               similarity).
-- SUBUNIT: Homodimer.
--- SUBCELLULAR LOCATION: Periplasmic (Potential).
--- SIMILARITY: Belongs to the Cu-Zn superoxide dismutase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Superoxide dismutase [Cu-Zn] like.

Pacteriol. 173:7449-7457(1991).
-!- FUNCTION: Destroys radicals which are normally produced within the cells and which are toxic to biological systems.
-!- FUNCTION: May confer survival advantage by accelerating dismutation of superoxide of environmental origin to hydrogen peroxide, disruptive to the normal mucociliary clearance process
                                                                                                                                                                                -!- SUBUNIT: Homodimer.
-!- SUBCELLULAR LOCATION: Periplasmic (Potential).
-!- SIMILARITY: Belongs to the Cu-Zn superoxide dismutase family.
                                                                                                                              CATALYTIC ACTIVITY: 2 superoxide + 2 H(+) = O(2) + H(2)O(2) COFACTOR: Binds 1 copper ion and 1 zinc ion per subunit (By
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         100.0%; Pred. ...

Infect. Imm., 71:7202-7207(2003).

-!- FUNCTION: Destroys radicals which are normally produced within the cells and which are toxic to biological systems (By similarity).
-!- CATALYTIC ACTIVITY: 2 superoxide + 2 H(+) = 0(2) + H(2)0(2).
-!- COFACTOR: Binds 1 copper ion and 1 zinc ion per subunit (By

similarity).
